

TABLE OF CONTENTS

A. Illustrated Dictionary

A Dictionary of Electronic Materials and Devices: Useful Terms

B. Selected Topics

1. Chapter 1

- 1.1. Bonding in Molecules and Solids
- 1.2. Ionic Crystals and Cohesive Energy: A Worked Example
- 1.3. Diffusion: Concepts and Solved Problems
- 1.4. Diffusion and Oxidation
- 1.5. Elementary Crystals: Solved Problems and Worked Examples
- 1.6. Secondary Bonding
- 1.7. Surface Tension of Crystals
- 1.8. Thermal Expansion and Grüneisen's Law
- 1.9. Units and Conversions in Materials Science
- 1.10. Virial Theorem, Electron Affinity and Ionization Energy
- 1.11. Elements of X-Ray Diffraction by Crystals $2d\sin\theta = n\lambda$

2. Chapter 2

- 2.1. Electrical and Thermal Conduction in Metals: Some Solved Problems and Worked Examples
- 2.2. Joule Heating and Electrical Conductivity
- 2.3. Thermal Conductivity, Resistance and Capacitance
- 2.4. Thermal Conductivity

3. Chapter 3

- 3.1. Quantum Physics: Some Solved Problems
- 3.2. Time-Dependent Schrödinger Equation

4. Chapter 4

- 4.1. Modern Theory of Solids: Some Solved Problems
- 4.2. Thermal Conductivity of Solids

5. Chapter 5

- 5.1. Semiconductors: Some Solved Problems
- 5.2. Hall Effect in Semiconductors
- 5.3. Piezoresistivity
- 5.4. Ideal Schottky Contacts

6. Chapter 6

- 6.1. Bipolar Junction Transistors at Low Frequencies: Principles and Solved Problems
- 6.2. Depletion MOSFET
- 6.3. High-Frequency Small-Signal BJT Model
- 6.4. Photolithography and Minimum Line Width in Semiconductor Fabrication
- 6.5. Recombination Current in a pn Junction

- 6.6. Overview of Semiconductor Device Fabrication
- 6.7. Shot Noise Generated by the *pn* Junction
- 6.8. Transistor Switches: Why the saturated collector-emitter voltage is 0.2 V

7. Chapter 7

- 7.1. Piezoelectric Materials and Devices Elementary Concepts
- 7.2. 6.Dielectric Materials: Some Solved Problems
- 7.3. **7.Complex Dielectric Constant**

8. Chapter 8

- 8.1. Atomic Diamagnetism: Elementary Concepts
- 8.2. Atomic Paramagnetism: Elementary Concepts
- 8.3. Ferrimagnetic Materials and Ferrosipinel Crystals- Ferrites in Electronic Engineering

9. Chapter 9

- 9.1. Optical Dispersion and Absorption in Materials: n vs. λ .
- 9.2. Real and Imaginary Dielectric Constant

C. Solved Problems

1. Chapter 1

- 1.1. Elementary Concepts in Materials Science: Solids
- 1.2. Elementary Crystals
- 1.3. Ionic Crystals
- 1.4. An Example in Van der Waals Bonding

2. Chapter 2

- 2.1. Electrical Properties of Metals: Solved Problems
- 2.2. Radiation Theory of the Electrical Fuse
- 2.3. Thermal Conductivity of Metals: Solved Problems

3. Chapter 3

- 3.1. He-Ne Output Spectrum
- 3.2. Modern Physics: Solved Problems

4. Chapter 4

- 4.1. Modern Theory of Solids: Some Solved Problems
- 4.2. Orbitals and Bonding

5. Chapter 5

- 5.1. Semiconductors: Some Solved Problems
- 5.2. Hall Effect in Semiconductors
- 5.3. Ionization Region in Doped Semiconductors
- 5.4. Piezoresistivity
- 5.5. Ideal Schottky Contacts

6. Chapter 6

- 6.1. Nonuniform Base Doping in the BJT
- 6.2. GaAs *pn* Junction
- 6.3. The Junction Field Effect Transistor (JFET)

6.4. The pn Junction Shockley Diffusion Current

6.5. Diffusion and Recombination Currents in a pn Junction (.docx)

6.6. Diffusion and Recombination Currents in a pn Junction (.pdf)

7. Chapter 7

7.1. Electric Field in Coaxial Cables

7.2. Dielectric Constant: Some Solved Problems

7.3. Piezoelectric Materials and Devices Elementary Concepts

7.4. Piezoelectric Coefficients

7.5. Relative Permittivity due to Electronic and Ionic Polarizability

8. Chapter 8

8.1. Paramagnetic Materials

9. Chapter 9

9.1. Complex Refractive Index and Light Absorption

9.2. Dispersion: Refractive Index vs. Wavelength Behavior

9.3. Fresnel's Equations
